## CONICS

1. Construct the graph of the conic section $\frac{(x-3)^{2}}{4}-\frac{(y+1)^{2}}{16}=1$.

From the Main Menu, press 9. Scroll down to the correct form and press ExE.

Enter the correct values. Note, the exponents in the denominators, so $A=2$, rather than 4. Also, note the minus signs in the numerator, so $\mathrm{H}=3$ and $\mathrm{K}=-1$. Press EXE after each value. As before, press $\operatorname{sHIFT}$ F3 (V-Window) to change the values for the window, then press EXIT. To draw the graph, press F6(DRAW).

2. Find the asymptotes for the conic graph.

To draw the asymptotes, press (sHIFT F5 (G-Solv) F5 (ASYMPT). The slope for each line is also displayed.

## CONICS

3. Find and label the vertices and foci for the conic graph.
 press SHIFT F5 (G-Solv) F1 (FOCUS). In each case, press © to move to the second point. To mark points and label the coordinates on the display, press ExE.
